

Use Case 1: Admin Views Members

Use Case Name: View Members

Primary Actor: Library Admin

Goal: The admin wants to view the list of all registered library members.

Precondition: The admin is logged into the Library Management System.

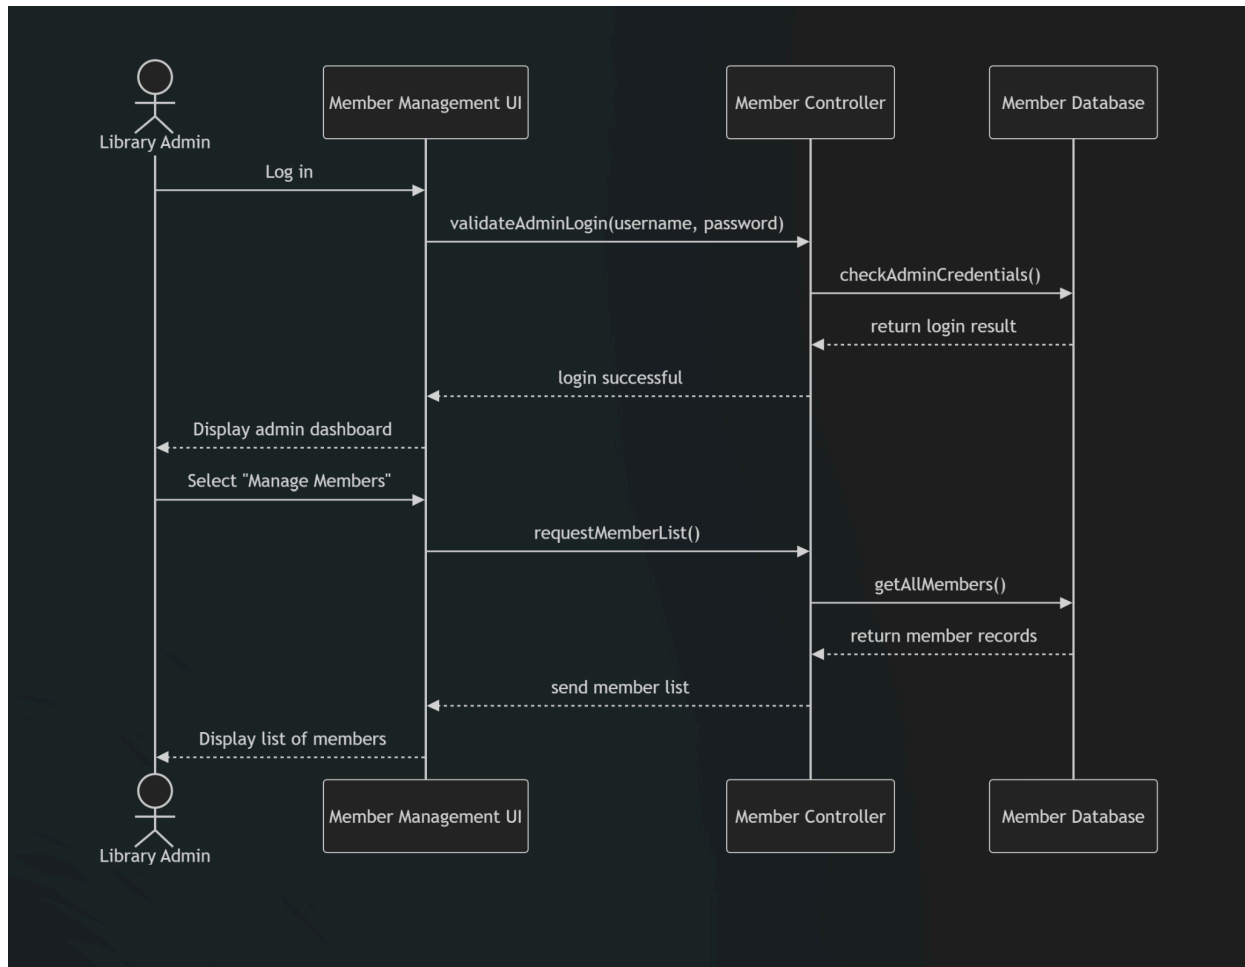

Postcondition: The system displays the list of library members.

Main Flow

1. The Library Admin logs in.
2. The Library Admin selects the **Manage Members** option.
3. The system requests the list of members.
4. The database returns the member records.
5. The system displays the list of members to the admin.

Alternate Flow

1. If no members are found, the system displays a message saying no members are available.
2. If the database cannot be reached, the system displays an error message.

Use Case 2: Admin Edits Members

Use Case Name: Edit Member Information

Primary Actor: Library Admin

Goal: The admin wants to update a library member's information.

Precondition: The admin is logged in and has access to member management.

Postcondition: The selected member's information is updated in the system.

Main Flow

1. The Library Admin logs in.
2. The Library Admin selects the **Manage Members** option.
3. The system displays the list of members.
4. The Library Admin selects the member they want to edit.
5. The system displays the selected member's current information.
6. The Library Admin enters the updated information.
7. The system validates the updated information.
8. The system saves the changes to the database.
9. The system displays a confirmation message.

Alternate Flow

1. If the selected member cannot be found, the system displays an error message.
2. If required information is missing, the system asks the admin to correct the form.
3. If the database update fails, the system displays an error message and does not save the changes.
